60-Second Deal Screener

Property: _____ **Date:** _____

Part A: Before you fall for anything.

Takes in: a listing or a broker whisper.

Hands to: AS-03, AS-01.

Six numbers, one minute, no spreadsheet. If a deal cannot survive this page, it does not deserve a phone call.

Pick your track

- Track 1: MHC lot-rent. Lots, lot rent, occupancy. The classic screen.
- Track 2: RV. Transient, monthly, and seasonal revenue, blended the way the park actually earns.

Track 1: MHC

Input	Your number
Lots (total pads)	
Lot rent / month ($)	
Occupancy (%)	
Who pays utilities (circle one)	Tenants pay own / Owner pays
Asking price ($)	
Target cap rate (%)	

The math

Line	Math	Your result
1	Gross potential rent = lots x rent x 12	
2	Effective income = Line 1 x occupancy %	
3	Expense ratio = 50% if owner pays utilities, 35% only if tenants pay their own directly (rule of thumb, verify locally)	
4	NOI = Line 2 x (1 minus Line 3)	
5	Max offer = Line 4 / target cap rate	
6	Gap = asking price minus Line 5. Gap % = Gap / Max offer: the headline	

The sensitivity strip

Three cap rates times two expense ratios. Fill every cell. The range is the answer; a single number is a guess.

	7% cap	8% cap	9% cap
Base ratio __%			
Stress ratio __%			

Three-page tool. Page 1: MHC track and the sensitivity strip. Page 2: RV track, the reverse solve, and the verdict stamp. Page 3: the 20-row screen log.

Track 2: RV

Input	Your number
Transient sites	
ADR: average daily rate ($)	
Transient annual occupancy (%)	
Monthly sites	
Monthly rent ($)	
Monthly occupancy (%)	
Seasonal sites filled	
Seasonal rent per site ($)	
Asking price ($)	
Target cap rate (%)	

The math

Line	Math	Your result
1	Transient revenue = sites x ADR x 365 x occupancy %	
2	Monthly revenue = sites x rent x 12 x occupancy %	
3	Seasonal revenue = sites filled x seasonal rent	
4	Effective income = Lines 1 + 2 + 3 (strip unverified other income)	
5	Expense ratio: RV parks commonly run 45 to 60% (rule of thumb, verify locally)	
6	NOI = Line 4 x (1 minus Line 5)	
7	Max offer = Line 6 / target cap rate	
8	Gap = asking price minus Line 7. Gap % = Gap / Max offer: the headline	

Reverse solve: what must be true for the ask

Required NOI = ask x target cap ($): _____ **Required effective income = required NOI / (1 - expense ratio) ($)**

Required occupancy at stated rent (%): _____ **Required rent at current occupancy ($/mo):** _____

If the answer needs over 100% occupancy or double the market rent, the ask is a story, not a price.

The verdict stamp

- ☐ CALL: max offer clears the ask at your ratio and cap. Book the call (AS-03).
- ☐ CALL WITH ONE CONDITION: the gap closes if one stated claim verifies. Write the claim here: _____. It becomes question one on the call.
- ☐ PASS: the gap survives the strip. Log it on page 3 and move on.

Screen log (20 rows)

Date, park, ask, max offer, gap %, verdict, and later, what happened. After 30 screens you own a personal hit rate.

Date	Park	Ask ($)	Max offer ($)	Gap %	Verdict	What happened

The 100-Screen Club: one hundred logged screens gives you a number nobody can sell you.

Worked example: Maple Bend Estates, MHC track (fictional)

Fictional screen of the $1,650,000 ask. Walk-verified inputs: 48 lots, $410 rent, 41 of 48 occupied (85.4%). The owner pays water and sewer, so the 50% ratio applies. Target cap 8%.

Rounding rule for this example: 41 / 48 = 85.416%, carried as 85.4% on the page, giving effective income $201,681. Carried unrounded, 41 / 48 gives $201,720. The verdict holds either way.

Line	Math	Result
1	Gross potential = 48 x 410 x 12	$236,160
2	Effective income = 236,160 x 85.4%	$201,681
3	Expense ratio 50% (owner pays water/sewer)	
4	NOI = 201,681 x 50%	$100,841
5	Max offer = 100,841 / 8%	$1,260,513
6	Gap = 1,650,000 - 1,260,513; Gap % = 389,488 / 1,260,513	$389,488; 30.9%

The strip

	7% cap	8% cap	9% cap
50% ratio	$1,440,586	$1,260,513	$1,120,456
35% ratio (if tenants paid utilities)	$1,872,757	$1,638,663	$1,456,589

Five of six cells sit under the ask. The one cell that clears it is the 35% ratio at the 7% cap ($1,872,757 against the $1,650,000 ask), and that ratio only applies when tenants pay their own utilities. They do not: the owner pays water and sewer here. The strip's honest answer is still PASS, and the headliner stays the 50% column.

Reverse solve

- Required NOI for the ask = 1,650,000 x 8% = $132,000.
- Required effective income at 50% expenses = 132,000 / 50% = $264,000.
- Required occupancy at $410 rent = 264,000 / 236,160 = 111.8%. Impossible.
- Required rent at 85.4% occupancy = $537 a month, against a $410 market.

Verdict: PASS

Headline gap: 30.9% over the number. Nothing to call about until the ask or the evidence moves.

The Doctrine

Price is not what the seller says, and your job is not to negotiate it down from there. Price is a bundle of claims: this many lots, at this rent, this full, at these costs. Your job is to find which claims must be true for the ask to work, then test the weakest one first. That turns a bargainer into an auditor of assumptions, and auditors do not fall in love with listings. The belief this shatters: that screening is guessing whether the price is "fair." Screening is asking what would have to be true. The rule: every screen gets logged with a verdict before the call, and the log gets reviewed every 30 screens for your personal hit rate.
