60-Second Deal Screener

Property: _____ **Date:** _____

Six numbers, one minute, no spreadsheet. If a deal cannot survive this page, it does not deserve a phone call.

1. The 6 inputs

Input	Your number
Lots (total pads)	
Lot rent / month ($)	
Occupancy (%)	
Who pays utilities (circle one)	Tenants billed back / Owner pays
Asking price ($)	
Target cap rate (%)	

2. The math

Line	Math	Your result
1	Gross potential rent = lots x rent x 12	
2	Effective income = Line 1 x occupancy %	
3	Expense ratio = 50% if owner pays utilities, 35% if billed back	
4	NOI = Line 2 x (1 minus Line 3)	
5	Max offer = Line 4 / target cap rate	
6	Gap = asking price minus Line 5	

3. Auto red flags

- ☐ Expense ratio needed outside 35 to 50% to make the story work.
- ☐ Occupancy claimed above 95% with no waitlist proof.
- ☐ Asking price more than 20% above your Line 5 max offer.
- ☐ Seller unwilling to share bank statements. Walk.

4. What the screener does not do

This screens deals in or out of a phone call. It is not underwriting and not an offer price. Real numbers come from bank deposits and bills, never from the brochure.
