POH / TOH Split-Valuation Worksheet

Property: _____ **Date:** _____

Sellers price park-owned homes twice: once inside the NOI, once on top. This worksheet splits them apart so you see the double count before you pay it.

1. The double-counting trap

- If home rental income sits inside your NOI and you also pay separately for the homes, you bought them twice.
- Lot rent buys dirt. Home rent buys a depreciating box. Price them separately.

2. Step 1: Isolate the lot rent

Line	Your number
Total monthly rent collected	
Less: home-rent portion (the house, not the lot)	
Equals: true lot rent per month	
Annualized: true lot rent x 12	

3. Step 2: Value the dirt

Park value = (annualized lot rent x (1 - expense ratio)) / cap rate

Expense ratio used (35-50%; 35% only if tenants pay utilities): _____ **Target cap rate:** _____

4. Step 3: Value the homes separately

Item	Your number
Number of POH units	
Average as-is market value per home	
Total home value	
Less: immediate repairs needed	
Net home value	

5. Step 4: The honest total

Total deal value = park value + net home value

Your honest total: _____ **Asking price (the gap is the negotiation):** _____

TOH note: tenant-owned homes are not yours to value. Confirm title status on every park-owned home with your attorney before you pay for one.
