Lot-by-Lot Walkthrough

Property: _____

Date: _____

Part E: Prove the ground.

Takes in: the rent roll's lot list

Hands to: AS-10/AS-10R, AS-14, AS-18

The walk is not a tour. It is a census and a diagnostic. Your eyes go on every lot, not the route the seller walks. The pattern is the information: clusters mean a failing system, scatter means management. Reconcile the physical count to the rent roll before you believe either.

The buyer observes. A licensed electrician inspects. Do not open panels.

The 1 to 3 scale, defined

- 1: needs work. Visible defects, safety or habitability issues.
- 2: serviceable. Lived-in, sound, nothing urgent.
- 3: good. Clean, tight, pride of the row.

Walk protocols

- Walk alone first. Then walk with the manager. Compare the two routes.
- Dusk walk: lighting, activity, who is actually home.
- After-rain walk: drainage, standing water, road washout.
- Winter if you can: frozen lines and heating tell the truth.

The lot grid: about 30 seconds per lot

Lot #	Marker = roll?	Home / rig	Pad 1-3	Meter	Issues	Photo #

Marker = roll: does the physical lot marker match the rent roll? Print extra grid sheets as needed. Front page 1: the grid. Front page 2: RV systems, the tally, the map, and the truck kit.

RV systems: utility-heavy checks

- [ ] Pedestal amperage as labeled: 30A, 50A, or both. Compare the label to the breaker size you can see without opening the panel.
- [ ] Pedestal condition: rust, scorch marks, cracked housings. Scorching is a finding.
- [ ] Sewer connection present, capped when vacant, no daylighted pipes.
- [ ] Water spigot at each site. Pressure at the far end of the run.
- [ ] Site length: fits a 40-foot rig? Pull-through vs. back-in, marked.
- [ ] Surface and drainage: gravel, paved, or mud. After rain is the real grade.
- [ ] Dump station condition and signage.
- [ ] Transformer and main service: size vs. site count, age, utility ownership.

Power check: pull 12 months of electric bills against claimed occupancy by month. A July system at 94% occupancy with a flat meter against June is a finding, not a coincidence.

Tally sheet: the walk becomes counts

Count	#
Occupied lots / sites	
Vacant, ready	
Vacant, needs work	
Derelict / abandoned units	
Total (must equal the lot count)	
Lots with issues	
% of lots with issues	

The park map

Sketch the park. Mark every issue by lot number. Clusters along one row or loop mean a failing line, a flood path, or bad fill. Scatter across the park means management. The map goes on the office wall after closing and gets updated every year.

Cluster found: _____ **It means:** _____

Truck kit

- Boots, flashlight, tape measure, phone camera, printed rent roll, this sheet, water.

Worked example: Maple Bend Estates (fictional)

48 lots. Walk tally: 41 occupied, 3 derelict, 4 vacant. Check: 41 + 3 + 4 = 48. The rent roll claimed 44 occupied: the 3 derelict units on lots 12, 27, and 33 were counted as occupied. Phantom occupancy: 44 - 41 = 3.

Lots with issues: 11 of 48. Percent with issues: 11 / 48 = 22.9% (11 / 48 = 0.2292). Pad grades averaged 1.9, below serviceable. The map: 7 of the 11 issues cluster on the north row. That is a system, not tenants. Camera the north water line before EMD hardens, and price the repair into the ask.

The Doctrine

The belief this shatters: the walk is a tour. It is a census and a diagnostic. The seller's route shows you the park they want to sell. Every lot shows you the park you would own. The pattern is the information: a cluster of issues along one loop is a failing system, and scatter across the park is management. The rule: every lot, every time, reconciled to the rent roll before you believe either one. Count the derelict units the paper called occupied. Draw the map, put it on the office wall after closing, and update it every year. It becomes the before picture everything else gets measured against.
