Day-90 / Day-365 Operating Review

Park: _____ **Date:** _____

Part G: Own it.

Takes in: your day-one baseline.

Hands to: AS-31 (built to sell).

You do not own the park until you own its baseline. Twice in the first year, measure what changed.

Built for MHC lot-rent math. RV parks run different economics.

1. Baseline vs now

Metric	Day 1 baseline	Day 90	Day 365
Occupied lots			
Lot rent collected ($)			
Delinquent balances ($)			
Utility cost ($)			
Reserve balance ($)			

Day 1 numbers come from the closing file and your first walk, not from the seller's brochure.

2. The quarterly walk

- [ ] Walk every lot, the same route as diligence day.
- [ ] Photograph the same trouble spots. Compare the photos, not your memory. Same angle, same time of day.
- [ ] Update the reserve number with what you actually spent this quarter.

3. The deposit check

Every quarter, tie bank deposits to the rent roll the way AS-15 did before you bought. If deposits drift below the roll, find the leak before it becomes the year.

Quarter deposits ($): _____ **Roll says should be ($):** _____

4. Reserve refresh

Reserve target ($): _____ **Reserve today ($):** _____

Rule of thumb, verify locally: one major system repair per year will find you. Fund like it.

- Rebuild the reserve with a fixed monthly transfer, not leftover cash. Leftovers never arrive.

5. Value-add sequencing: first, second, third

First (months 1 to 3): _____

Second (months 4 to 9): _____

Third (months 10 to 12): _____

- Sequence by payback and pain: collections systems before cosmetics.
- One project at a time until occupancy is stable.

Worked example: Maple Bend Estates, fictional

Fictional. Day 1 baseline comes from the closing file, not the brochure: 41 occupied lots, monthly collections $15,750, delinquencies $6,300, utility cost $4,200 a month, reserve funded at $35,500.

Metric	Day 1	Day 90	Day 365
Occupied lots	41	42	44
Monthly collections ($)	15,750	16,134	16,903
Delinquent balances ($)	6,300	3,150	1,575
Utility cost ($/mo)	4,200	4,050	3,900
Reserve balance ($)	35,500	28,000	35,500

Collections use the realized $384.15 per occupied lot: 42 x 384.15 = $16,134; 44 x 384.15 = $16,903. Delinquencies halve each period: 6,300 / 2 = 3,150; 3,150 / 2 = 1,575.

Reserve refresh: the target is 6 months of operating costs. 71,000 / 12 = $5,916.67 a month; x 6 = $35,500. A $7,500 sewer repair in month 3 drops the reserve to 28,000; three quarterly refills of $2,500 (2,500 x 3 = 7,500) bring it back to target by day 365.

Sequencing: first, collections cleanup (months 1 to 3). Second, the lot-by-lot condition sweep (months 4 to 9). Third, a rent-to-market test on turns only (months 10 to 12). One project at a time.

The Doctrine

The belief this tool shatters is that closing means you own the park. Closing means you own the paper. You own the park when you own its baseline: the real numbers on day one, measured again at day 90 and day 365. Memory lies. Tenants tell you what you want to hear. The photographs from the quarterly walk do not. The rule is one sentence: measure the same numbers on the same route twice in the first year, and let the gap between baseline and now write your project list. The park you bought and the park you run are two different parks. The review is where they meet.
