Lender One-Pager

Property: _____ **Date:** _____

Part F: Decide and structure.

Takes in: AS-08 (expenses), AS-09 (homes), AS-10 (fill), AS-13 (utilities)

Hands to: AS-17 (financing date), AS-07 (structure the offer)

Lenders do not think in lot rent and vibes. They think in trailing actuals, coverage, and who pays the utilities. Fill this in before the meeting so you answer their questions before they ask them.

1. The loan summary

Line	Your number
Purchase price ($)	
Down payment ($)	
Loan ask ($)	
LTV (loan ask / price)	
Rate	
Amortization	
Annual debt service ($)	

2. DSCR three ways

DSCR = net operating income / annual debt service.

NOI view	NOI ($)	DSCR
Seller NOI (their number)		
Normalized NOI (seller NOI less management, reserves, insurance re-quote)		
Lender NOI (normalized less vacancy floor, management minimum, reserves)		

1.25x is a rule of thumb, verify locally: it varies by lender.

Read the three lines top to bottom. That is where coverage breaks.

Small parks are mostly financed by local banks, credit unions, SBA programs, and seller notes. Larger agency programs generally target bigger communities. Verify with lenders.

3. Stress rows

Scenario	Stressed NOI ($)	DSCR
Occupancy down 15 points		
Rate up 100 basis points		

Front continues on page 2: the borrower block, the 12 questions, the first-timer guide, and the lender tracker.

4. The borrower block

Team: attorney: _____ **Team: CPA:** _____

Team: manager or operator: _____ **Team: engineer:** _____

Relevant experience: _____

Covering the gaps

- ☐ Operator partner with park experience, named.
- ☐ Third-party manager under contract or letter of intent.
- ☐ Seller transition period, in the term sheet.

5. The 12 questions, one answer line each

Question	Your one-line answer
Show me 12 months of bank deposits, not just the P and L.	
Who pays the utilities and can you prove it?	
How many park-owned homes and what are they really worth?	
What is your management plan?	
What is your experience operating this asset class?	
Walk me through your expense assumptions versus the seller's.	
What breaks in the next 5 years and what does it cost?	
What is your contingency if occupancy drops 15 percent?	
Who runs the park day to day if you keep your job?	
Show me the last 12 months of utility bills.	
What is your reserve plan for infrastructure?	
Why this park, and why now?	

6. First-timer answer guide

The question first-timers dread is the experience question. Answer it honestly, then bridge.

My honest answer (no park experience yet, or state what you have): _____

My bridge plan (operator partner, manager, seller transition, reserves): _____

7. Lender tracker

Lender	Appetite for small parks	Terms quoted	Timeline	Next step

Tie the financing contingency date to the EMD Tracker (AS-17). A contingency that lapses because coverage failed after EMD went hard is money lost.

Before the meeting

- ☐ Bring 12 months of bank statements, the rent roll, and your insurance quote.
- ☐ Know your DSCR cold. If you cannot defend the coverage, the meeting is over.

This sheet prepares you for questions. It is not financing advice. The lending decision belongs to your lender.

Worked example: Maple Bend Estates (fictional)

Fictional loan on a fictional park. Seeds: ask $1,650,000, target price $925,000, deposits $189,000, seller expenses $71,000, normalized expenses $112,530, 48 lots, 41 occupied. The four NOI numbers: seller's stated $145,480; deposit-basis $118,000; normalized $76,470; lender $69,470. Fictional loan: 70% LTV, 7.5%, 25-year amortization.

Financing at the $925,000 target

Line	Math	Result
Loan ask	925,000 x 0.70	$647,500
Down payment	925,000 - 647,500	$277,500
Annual debt service	Payment on $647,500 at 7.5%, 25 years	$57,420
DSCR, seller's stated	145,480 / 57,420	2.53x
DSCR, deposit-basis	118,000 / 57,420	2.06x
DSCR, normalized	76,470 / 57,420	1.33x
DSCR, lender	69,470 / 57,420	1.21x

Financing at the ask, $1,650,000, same terms

Line	Math	Result
Loan ask	1,650,000 x 0.70	$1,155,000
Down payment	1,650,000 - 1,155,000	$495,000
Annual debt service	Payment on $1,155,000 at 7.5%, 25 years	$102,424
DSCR, seller's stated	145,480 / 102,424	1.42x: this is why the seller thinks it works
DSCR, deposit-basis	118,000 / 102,424	1.15x
DSCR, normalized	76,470 / 102,424	0.75x
DSCR, lender	69,470 / 102,424	0.68x

Stress rows, at the $925,000 target

Line	Math	Result
Occupancy down 15 points	Revenue 189,000 x 34/41 = 156,732. Expenses held flat at 112,530 on purpose. NOI 44,202. 44,202 / 57,420	0.77x
Rate up 100 bps	Debt service 62,566. Normalized DSCR 76,470 / 62,566	1.22x

Lender math, stated plainly: the lender does not stack a vacancy haircut on deposits that already show the real vacancy. Lender effective income is the lower of proven revenue ($189,000) or gross potential rent x 90% (48 x 410 x 12 x 0.9 = $212,544), so the lender underwrites $189,000.

Where coverage breaks: at the $925,000 target the lender DSCR is 1.21x, just short of the 1.25x rule of thumb, verify locally. It needs seller paper or a lower LTV. At the ask, the seller's number shows 1.42x, which is why the seller thinks it works, but your normalized number is 0.75x and the lender's is 0.68x. The lender's line is the truth: at $1,650,000 this park does not cover its debt.

The Doctrine

The belief this tool shatters is that lenders are obstacles. The lender is your first independent auditor. A lender who will not finance is telling you something about the deal, and their math is cheaper than your earnest money. Run the DSCR three ways before the meeting, not after: the seller's number shows what they believe, the normalized number shows what the park earns, the lender's number shows what gets funded. When those three disagree, the disagreement is the negotiation. Use their discipline as a second walk-away test. The one rule: if the lender's math says no, that is information, not an obstacle. Price the deal until the coverage holds, or walk it. The rite of passage is a lender saying this is the cleanest package a first-time buyer has sent.
