Deals I Walked Ledger and Post-Mortem

Buyer: _____ **Year:** _____

Part G: Own it.

Takes in: every deal you pass on.

Hands to: your calibration.

Every pass is tuition. Log it the day you walk, while the reason is honest. A year later, this page is your calibration.

1. The ledger

Park	Date walked	Asking ($)	Evidence price ($)	Walk reason

2. What a good walk reason looks like

- ☐ Names the evidence, not the feeling: 'seller NOI counted a one-time refund,' not 'did not feel right.'
- ☐ States your evidence price: the number the documents supported, written before the walk.
- ☐ Records the threshold that fired: which rule made it a walk (AS-19, AS-01, or your own screen).

3. Post-mortem: one deal per quarter, minimum

Park: _____

What I got right: _____

What I missed: _____

What happened to the park after I walked: _____

What I will do differently next time: _____

4. The calibration engine

Tally your walk reasons every quarter. The reason that repeats is a screen you should run before the first call.

Walk reason	Times this quarter	Becomes a screen?

- ☐ Log the walk the same day. Memory edits the reason within a week.
- ☐ Review this page quarterly. Patterns in your walk reasons are your real investment criteria.
- ☐ A walk reason that keeps repeating is a screen you should run before the first call, not after diligence.

Three honored walk-aways teach more than one closed deal. The pact (AS-01) decides. This page remembers.

Worked example

All three entries below are FICTIONAL. No real deals are shown. They demonstrate how the log teaches.

Fictional entry 1: Cedar Bluff (FICTIONAL)

Walked 2026-03-14. Ask $1,200,000. Evidence price: $980,000 (seller NOI counted a one-time insurance refund as income). Walk reason: could not close a $220,000 gap on proof. Later: sold 8 months later to another buyer for $990,000, which is $10,000 above my evidence price, about 1%. Lesson: the evidence price held. My math was the market.

Fictional entry 2: Hickory Run (FICTIONAL)

Walked 2026-05-02. Ask $890,000. Forty percent of the homes were park-owned with thin repair records. Walk reason: POH capex I could not quantify. Later: sold 6 months later; the new owner kept the POHs and rented them. Lesson: my POH screen fired on count alone. Next time: quantify the capex, price it, then decide. Walk on numbers, not nerves.

Fictional entry 3: Fox Hollow (FICTIONAL)

Walked 2026-07-19. Ask $1,450,000. Walk reason: the well test failed and the seller would not pay for a second test (KILL under AS-19). Later: county records show the well was replaced within the year. Lesson: the walk-away pact (AS-01) is the whole reason this page exists. The ledger proves the discipline worked.

What the log teaches after three passes

- [ ] Cedar Bluff: my evidence price was right within about 1%. Trust the math.
- [ ] Hickory Run: my screen needs a middle step (quantify, price, or walk) before it fires.
- [ ] Fox Hollow: the KILL rule did its job. No regret, and now there is proof of it.

The Doctrine

The belief this tool shatters is that a pass is a failure. A pass with an honest reason is tuition with a receipt. The one rule: log the walk the same day, with the real reason, then check back on what happened later. Memory edits the reason within a week. The ledger does not. Over quarters, your walk reasons become your actual investment criteria, sharper than anything you wrote before the first deal. A walk reason that keeps repeating is a screen you should run before the first call, not after diligence. Three honored walk-aways teach more than one closed deal. The pact decides. This ledger remembers why.
